Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/788,614

Applicant(s)

SIDDIQUI, QIRFIRAZ AHMED

Examiner

KWASI KARIKARI

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 December 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 12-26 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 12-26 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed on 12/17/2007 with respect to claims 12-26 in the remarks, have been considered but are moot in view of the new ground(s) of rejection necessitated by the new limitations added to claims 12, 16, 22 and 25. See the rejection below of claims 12, 22 and 25 for relevant citations found in Rankin et al., (U.S. 6,879,838 B2), (hereinafter Rankin) in view of Hasebe et al., (U.S. 6,946,991) disclosing the newly added limitations.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 12-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 12, 22 and 25, the applicant recites the limitations "the time of year" and "the time of day", however, there are insufficient prior antecedent basis for these limitations in the claims. For examination purposes, the examiner will treat the rejected claimed limitations in the broadest interpretation of the Applicant's specification. Appropriate corrections are required.

Claim Objection

3. Claim 22 is objected to because of the following informalities: Applicant uses "and the and the" on page 4, line 11. Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 12-26 are rejected under U.S.C. 103(a) as being unpatentable over Rankin et al., (U.S. 6,879,838 B2), (hereinafter Rankin) in view of Hasebe et al., (U.S. 6,946,991), (hereinafter Hasebe).

Regarding claim 12, Ranking discloses a method of notifying a mobile device (= mobile device 100) of location-dependent timings (= location base information system that uses user location information and preference to push location information to the user, see col. 6, lines 28-65 and Fig. 4) the method comprising:

determining an estimated location of the mobile device, within a precision of a coverage area of at least one base station (= wireless base stations 140 in communication network 102, see col. 3, lines 36-42, 61-67 and Fig. 3) by employing a location technology algorithm (= once the mobile device 100 is determined to be within a defined area, the action may triggered, see col. 5, lines 27-40 and col. 6, lines 45-51; and the location determination system allows the device to determine its location either from the network or independently from the system, see col. 1, lines 54-64; col. 4, lines 12-16; and col. 7, line 55- col. 8, line 46);

comparing the estimated location of the mobile device to a translation table stored at one or more memory locations including the mobile device and/or a remote server capable of forwarding information to the mobile device, said translation table used to determine at least one time based on a function of at least the estimated location of the mobile device, the time of day as measured at the estimated location, and where the estimated location of the mobile device used to determine the at least one time is based on the coverage area of the at least one base station (140) and a current cell identification (Cell ID) parameter (cell registration) assigned to the mobile device (see col. 3, lines 33-67, col. 4, line 12- col. 5, line 12, col. 5, lines 27-67; and col. 6, lines 28-51); and

translating the determined at least one time into a wireless communication message and forwarding the message to the mobile device (see col. 4, line 38- col. 5, line 12 and col. 6, lines 28-51). Although Rankin teaches the push of several event information to the mobile device, based on location and time information and user's

preference information (see col. 4, line 38- col. 5, line 12 and col. 6, lines 28-51); however, Rankin fails specifically to mention a “prayer times” and “the time of year as measured from prestored annual calendar position corresponding to estimated location”

Hasebe, however, teaches a “prayer times” and “the time of year as measured from prestored annual calendar position corresponding to estimated location”

(= portable terminal includes GPS; and the portable terminal associates location and time with prayer times and direction, see col. 1, lines 37-63; col. 3, lines 28-50; col. 4, lines 6-45, col. 9, line 10- col. 10, line 37; and col. 11, lines 20-32).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 13, as recited in claim 12, Rankin further discloses the method, wherein the estimated location of the mobile device has a precision of the coverage area of at least two adjacent base stations (see col. 3, lines 36-42 and lines 61-67).

Regarding claim 14, as cited in claim 12, Rankin teaches the pushing of preference information to the communication device 100 based on location/time in the network 102

that includes base stations 140 (see col. 3, lines 36-42, lines 49-60; col. 4, line 38- col. 5, line 12; col. 6, lines 28-51); and Fig. 2). However, Rankin fails to teach an “**Azaan-neighborhood**” in the translation table to determine the at least one “**prayer time**”.

However, Hasebe teaches a portable terminal that includes GPS; and the portable terminal associates location and time with prayer times and direction (see col. 1, lines 37-63; col. 3, lines 28-50 and col. 4, lines 6-45).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 15, as recited in claim 12, Rankin fails specifically to teach the method, wherein the at least one prayer time is a Muslim prayer time.

Hasebe, however, teaches a portable terminal that includes GPS; and the portable terminal associates location and time with prayer times and direction. (see col. 1, lines 37-63; col. 3, lines 28-50 and col. 4, lines 6-45).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to

combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 16, as recited in claim 12, Rankin further discloses the method, wherein the location technology algorithm calculates the location of the mobile device based on the Cell ID assigned to the mobile device (see col. 9, lines 1-10).

Regarding claim 17, as recited in claim 12, Rankin further discloses the method, wherein the location technology algorithm calculates the location of the mobile device based one or more of the following location technologies: global positioning system (GPS), assisted global positioning system (AGPS), advanced forward link trilateration (AFLT), enhanced observed time difference (EOTD), time difference of arrival (TDOA), angle of arrival (AOA) and enhanced forward link trilateration (EFLT) (= GPS system can involved in location determination function, see col. 4, lines 11-37).

Regarding claim 18, as recited in claim 12, Rankin further discloses the method, wherein the wireless communications operate over one or more of the following wireless communications protocols: advanced mobile phone service (AMPS), global system for mobile communication (GSM), time division multiple access (TDMA), frequency division multiple access (FDMA), code division multiple access (CMDA), general packet radio

service (GPRS), universal mobile telecommunications system (UMTS) and integrated digital enhanced network (/DEN') (= network 102 may be packet switch or circuit switch network, e.g. PSTN, see col. 6. lines 13-27).

Regarding claim 19, as recited and modified in claim 12, as Rankin further discloses the method, wherein the time is transmitted to the mobile device via a push protocol (see col. 4, line 61- col. 5, line 15)

Regarding claim 20, as recited in claim 12, Rankin further discloses the method, wherein the method further comprises: monitoring subscriber information of a plurality of subscribers stored in a database and determining if each subscriber is currently connected to the subscriber network and updating the current Cell ID and location information of the subscriber and determining least one additional time based on the updated Cell ID and location information (see col. 4, lines 12-67).

Regarding claim 21, as recited in claim 12, Rankin further discloses the method, wherein the wireless communication message is at least one of a text message, a tone indicator and a media file (see col. 4, lines 6-11 and col. 6, lines 28-51).

Regarding claim 22, Rankin a method of notifying a mobile device (= mobile device 100) of location-dependent timings (= location base information system that uses user

location information and preference to push location information to the user, see col. 6, lines 28-65 and Fig. 4), the method comprising:

determining an estimated location of the mobile device within a precision of a coverage area of at least one predetermined stored in a translation table stored at one or more memory locations including the mobile device and/or a remote server capable of forwarding information to the mobile device, said translation table used to map the coverage area to at least a portion of the coverage area of at least one base station in communication range of the mobile device (see col. 3, lines 33-67, col. 4, line 12- col. 5, line 12, col. 5, lines 27-67; and col. 6, lines 28-51);

determining at least one estimated time based on a function of at least the estimated location of the mobile device and the time of day as measured at the estimated location and a current cell identification (Cell ID) parameter (cell registration) assigned to the mobile device (see col. 3, lines 33-67, col. 4, line 12- col. 5, line 12, col. 5, lines 27-67; and col. 6, lines 28-51);and

translating the determined at least one time into a wireless communication message and forwarding the message to the mobile device (see col. 4, line 38- col. 5, line 12 and col. 6, lines 28-51). Although Rankin teaches the push of several event information to the mobile device, based on location, time information and user preference information (see col. 4, line 38- col. 5, line 12 and col. 6, lines 28-51); however, Rankin fails specifically to mention Azaan-neighborhood in association with "prayer times" and "the time of year as measured from prestored annual calendar position corresponding to estimated location"

Hasebe, however, teaches a “prayer times” and “the time of year as measured from prestored annual calendar position corresponding to estimated location”

(= portable terminal includes GPS; and the portable terminal associates location and time with prayer times and direction, see col. 1, lines 37-63; col. 3, lines 28-50; col. 4, lines 6-45, col. 9, line 10- col. 10, line 37; and col. 11, lines 20-32).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 23, as recited in claim 22, Rankin fails to teach Azaan-neighborhood.

Hasebe, however, teaches a portable terminal that includes GPS; and the portable terminal associates location and time with prayer times and direction (see col. 1, lines 37-63; col. 3, lines 28-50 and col. 4, lines 6-45).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by

Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 24, as recited in claim 22, Rankin fails to teach Azaan-neighborhood.

Hasebe, however, teaches a portable terminal that includes GPS; and the portable terminal associates location and time with prayer times and direction (see col. 1, lines 37-63; col. 3, lines 28-50 and col. 4, lines 6-45).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 25, Rankin discloses a system of notifying a mobile device (= mobile device 100) of location-dependent timings, (= location base information system that uses user location information and preference to push location information to the user, see col. 6, lines 28-65 and Fig. 4) the system comprising:

at least one base station (140) in communication with the mobile device;

a location server that determines an estimated location of the mobile device within a precision of a coverage area of that at least one base station by employing a location technology algorithm (= location determination is made from the network, see col. 4, lines 12-60; and col. 7, line 55- col. 8, line 54)

a server that runs a time calculation program application and compares the estimated location of the mobile device to a translation table stored at one or more memory locations including the mobile device and/or a remote server capable of forwarding information to the mobile device, said translation table to determine at least one time based on a function of at least the estimated location of the mobile device and the time of day as measured at the estimated location (see col. 3, lines 33-67, col. 4, line 12- col. 5, line 12, col. 5, lines 27-67; and col. 6, lines 28-51); and

where the estimated location of the mobile station used to determine the at least one time has a precision of the coverage area of the at least one base station and a current cell identification (Cell ID) parameter (cell registration) assigned to the mobile device (see col. 3, lines 33-67, col. 4, line 12- col. 5, line 12, col. 5, lines 27-67; and col. 6, lines 28-51); and a gateway that communicates with the server and which relays the at least one time to the mobile device (see col. 4, line 1- col. 5, line 12; col. 6, lines 28-51; col. 7, line 55- col. 8, line 54 and Fig. 2); however, Rankin fails specifically to mention a “prayer times” and “the time of year as measured from prestored annual calendar position corresponding to estimated location”

Hasebe, however, teaches a “prayer times” and “the time of year as measured from prestored annual calendar position corresponding to estimated location”

(= portable terminal includes GPS; and the portable terminal associates location and time with prayer times and direction, see col. 1, lines 37-63; col. 3, lines 28-50; col. 4, lines 6-45, col. 9, line 10- col. 10, line 37; and col. 11, lines 20-32).

Rankin and Hasebe are analogous art because they disclose concepts and practices regarding location-base services including GPS information in a communication system. At the time of the invention it would have been obvious to combine Hasebe into Rankin. The motivation for such combination would have been, as Hasebe suggests (see col. 3, lines 45-50), to effectively use the portable telephones by Muslims who pray, to display arrows showing the prescribed directions at the prescribed times.

Regarding claim 26, as recited in claim 25, Rankin further discloses the system, wherein the mobile device is one of: a mobile phone, location-aware wirelessly connected personal digital assistant (PDA), handheld personal computer, tablet personal computer, and a pocket personal computer (see col. 8, lines 35-62).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kwasi Karikari whose telephone number is 571-272-8566. The examiner can normally be reached on M-F (8 am - 4pm). If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rafael Pérez-Gutiérrez can be reached on 571-272-7915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8566. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
